## Medical Practice

### **Fatty Liver changes seen on recent ultrasound scan**

Thank you for having your recent tests. They have shown that you have a fatty liver. This is where there is a buildup of fatty deposits in and around the liver. This is something that can be treated with simple lifestyle changes. There is no medication that can help this.

If you want help and support with your lifestyle changes please contact the Healthy Lifestyle Service on 01952 382 582 or visit their website
